Subject: Comments on ACS PGCS Quarterly Monitoring Report

Here are some comments on the October 1997 report:

1. The figures referenced on page 9 are missing from my copy of the report.
2. Was the laboratory notified of the errors attributed to the lab?
Did the lab substantiate that they are responsible for the errors?
3. Was the analytical data validated?
4. Many pages of data in the appendix are stamped "Preliminary Data Pending QC, Final Review and Approval." Why isn't the final reviewed data presented instead?
